
The AI Visibility Self-Assessment

Score your business in 5 minutes

A six-dimension scorecard for established small businesses — coaches, consultants, agencies, SaaS founders, and brick-and-mortar firms whose buyers research before they decide.

Why this matters

Something quietly changed in the last 18 months.

A meaningful share of your buyers stopped Googling and started asking ChatGPT, Claude, Gemini, and Perplexity for recommendations.

73%

of B2B buyers now research vendors using AI agents.

Forrester, 2026

42.8%

YoY growth in AI search traffic, versus 2.4% for Google.

SimilarWeb, 2026

Most of this happens invisibly. The customer asks AI, gets a recommendation (or doesn't), and you never see the visit in your analytics.

When your buyer asks an AI agent for a recommendation in your category, you are either named — or you're not. If you're not, you've lost a lead you never knew existed.

— How to use this scorecard

- 30 yes / no questions — five per dimension.
- One point per yes. Five points possible per dimension. Thirty total.
- Be honest — there's no prize for a high score, only useful information.
- Count your yeses in the score box at the end of each dimension.
- At the end, find your tier and decide what to do next.

A note on what's normal. Most established small businesses score between 8 and 18 their first time through. If you score lower, that's not failure — it's a starting line.

SCORE	TIER	WHAT IT MEANS
26-30	Agent-Ready	Top 5% for AI visibility. AI surfaces and recommends you accurately. Maintain, monitor, and tighten any dimension under 4.
19-25	Discoverable	AI knows you exist, but the picture is incomplete or stale. Typically 3-7 specific fixes move you to Agent-Ready in 60 days.
12-18	Faintly Visible	AI knows your category but doesn't reliably name you. The most common tier — and the one with the highest upside.
6-11	Hidden	AI rarely surfaces your business when asked. Not invisible, but rarely the answer. Fixes are usually foundational.
0-5	Invisible	AI does not reliably know your business exists. The path forward: structured information, entity clarity, and a few external citations.

You've seen what you can see.

Now see what AI is actually saying.
